Undergraduate Program Review
Industrial Technology

General Comments:
All the undergraduate engineering programs in the College of Engineering are externally assessed and accredited by the Engineering Accreditation Commission of ABET every six years. The College of Engineering had an accreditation visit during 14-17 November 2009.

Specifically, the program of Industrial Technology (ITEN) has recently been granted renewal accreditation by the Association of Technology, Management, and Applied Engineering (ATMAE) for the period of November 1, 2009 to November 1, 2015. The ITEN program has been fully accredited by ATMAE (former National Association of Industrial Technology) since October 1995. The most recent on-site visit by the ATMAE team was in April 5-7, 2009.

Strengths:
- A strong program with relatively stable enrollment and graduation.
- Very well documented ITEN program on outcomes and student learning experience.
- The self study has supplied ample evidence of compliance with the criteria established in the guidelines.
- The provided ITEN Program Review Matrix, the ITEN self-study report, and the reference supporting materials support compliance with guidelines established by the accreditation agency and the university.

Weaknesses:
None

Recommendation:
Unconditional continuation
