

## More Than Just A Label: Shampoo & Its Adverse Effects: A Systematic Review

Brissa Acevedo and Dr. Mauro Castro Department of Chemistry

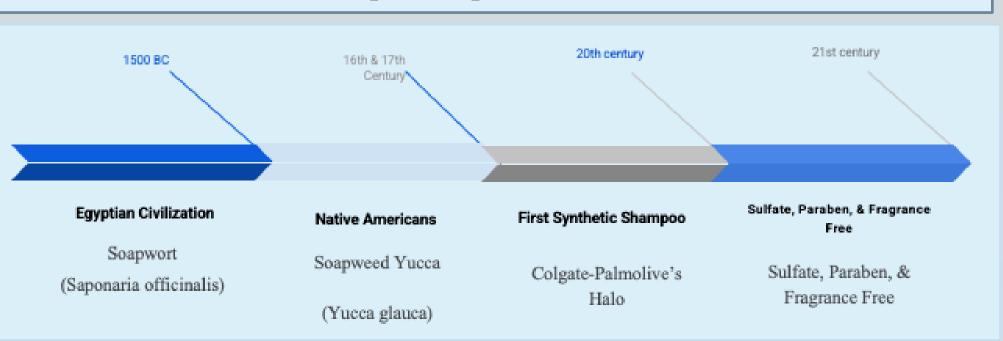

MCNAIR SCHOLARS PROGRAM

### **ABSTRACT**

Do you read your shampoo label? Within recent years, consumers have raised a concern towards environmental health and awareness in regards to what they are using. However, not many people understand what each ingredient means or does. The current research's aim is to review, break down, and explain the frequent ingredients found in shampoo and their adverse effects. In order to do this, the data being collected is found by using the systematic review method in which articles were collected via databases that collect various chemical articles. The data available ranges from 1997 to 2020. From the available data, the results yield that consumers should be aware of and research what ingredients are being used on their hair and scalp. Keywords: Shampoo, hair, scalp, cosmetics, fragrance, sulfates, parabens, hair loss, pH, allergies

### INTRODUCTION

- Cosmetics, the industry of beautification: Tracing back more than 100,000 years, cosmetics have been used to treat the mind, body, and soul (Draelos, 2015).
- U.S. Food and Drug Administration (FDA): ensure the safety, efficacy, and security of products for human use.
- Federal Food, Drug, and Cosmetic Act (FD&C Act): federal law enacted by Congress.
  - Sec. 201(i): Cosmetics
  - Sec. 201 (g)(1): Drug
- Cosmetic Timeline: Soap/Shampoo

### PURPOSE OF THE STUDY

The current research's aim is to review, break down, and explain the frequent ingredients found in shampoo and its adverse effects.

### RESEARCH QUESTIONS

- What are the ingredients in shampoo, such as sulfates, parabens, and fragrance?
- Why are they important?

### **METHODS**

The data is collected by using the systematic review method in which articles were collected via databases that collect various chemical articles.

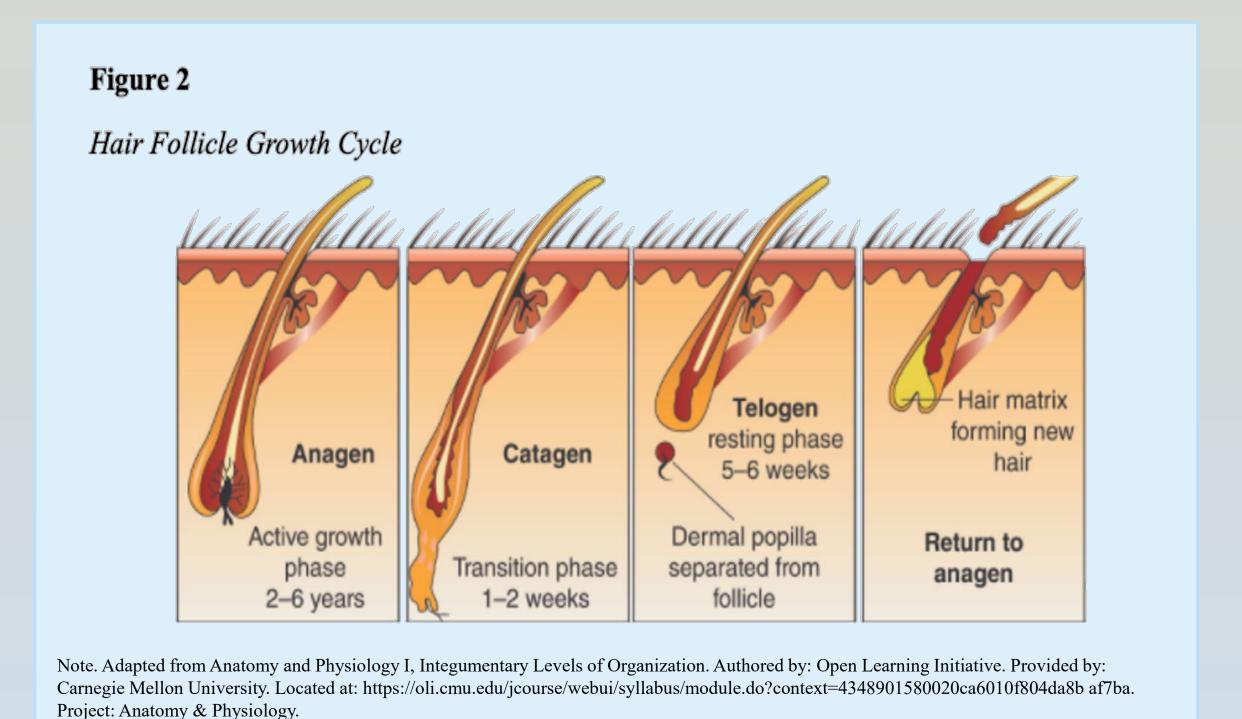

### RESULTS & DISCUSSION

- Adverse Effects and Allergic Reactions
  - Dandruff
  - Contact Dermatitis
  - Hair Loss
    - Depression

- Sulfate, Paraben, and Fragrance-Free (Cline et al., 2018; Dias, 2015).
- DMDM hydantoin
- Emily Castillo v. Unilever United States, INC. 2020
- FDA regulations

Project: Anatomy & Physiology.

Shamnon determent characteristics

| Surfactant Type     | Chemical Class   | Characteristics  |  |
|---------------------|--|--|--|
| Anionics            | Lauryl sulfates, laureth sulfates, sarcosines, sulfosuccinates                       | Deep cleansing, may leave<br>hair harsh                        |  |
| Cationics           | Long-chain amino esters, ammonioesters   | Poor cleansing, poor lather, impart softness and manageability |  |
| Nonionics           | Polyoxyethylene fatty<br>alcohols, polyoxyethylene<br>sorbitol esters, alkanolamides | Mildest cleansing, impart manageability                        |  |
| Amphoterics         | Betaines, sultaines, imidazolinium derivatives                                       | Nonirritating to eyes, mild cleansing, impart manageability    |  |
| Natural surfactants | Sarsaparilla, soapwort, soap<br>bark, ivy, agave                                     | Poor cleansing, excellent lather                               |  |

Top 10 Most Common Used Shampoos: Ingredients and available pH Level

| Shampoo<br>Brand   | Shampoo<br>Name                             | Ingredients  | pH Level  |

### **CONCLUSION**

- Consumers should be aware of and research what they are putting on their hair and scalp.
- Companies need to:
  - Include pH levels (5-7)
  - Include all ingredients with %
  - Listen to consumers
