

WHAT

WE

OFFER

EMBROIDERY

Our embroidery machine can be used for blankets, t-shirts caps, bags, polos, and sweatshirts like the picture provided. With access to digitizing software, we can turn any logo or picture into an embroidery project. With this 6 needle machine. There also two sewing machines available for guests to use.

LARGE FORMAT PRINTING

Our large format printers are available to print stickers, banners, heat transfer vinyl, posters, and plain paper.

VINYL CUTTING

Our cricut machines are available to cut both heat transfer vinyl for fabric application and permanent (sticker) vinyl for harder surfaces. We have a limited select of colors of heat and permanent vinyl.

SEWING

Our sewing machines can be used for making clothes and other items by connecting fabric layers with various stitch patterns

LASER ENGRAVING AND CUTTING

Our four engraving machines use automation to achieve precise cuts and engravings on various materials, including metal, wood, glass and plastic.

3-D PRINTING

With BambuLabs 3-D printers and our FormLabs 3-D resin printer, you are able to 3-D print with multiple materials. We provide filament as well as resin so all you need is a design and staff will walk you through the process.

HEAT PRESS

Our heat presses are engineered to imprint a design or graphic on a substrate, such as a t-shirt, with the application of heat and pressure for a preset time period.

PODCAST STUDIO

Our podcast studio has multiple purposes. While having the equipment for a podcast, users can record for course assignments or just for fun. There is also large studio lights, a ring light, a green screen, camera, and a large monitor available to be used in the room for whatever users require it for.

DTF TRANSFERS

Our DTF Printer allows you to print vibrant, high-quality designs that can be heat-pressed onto a wide variety of fabrics and materials.

The following are available for use by students, faculty, staff, and the community!
